

Energy Performance Score

brought to you by Energy Trust of Oregon

EPS is a tool to assess a home's energy cost and carbon footprint.

EPS™ is an energy performance score that measures and rates the net energy consumptions and carbon footprint of a newly constructed home. The lower the score, the better — a low EPS identifies a home as energy efficient with a smaller carbon footprint and lower energy costs.

Estimated Monthly Energy Costs

\$124*

Estimated average annual energy costs:

\$1,489*

Estimated average energy cost per month: Electric \$78, Natural Gas \$46

Estimated Energy Cost calculated using \$0.11 per kWh and \$0.84 per therm

Location

18989 Pilkington Rd
Lake Oswego, OR 97035

YEAR BUILT: 2018

SQ. FOOTAGE: 3,863

EPS ISSUE DATE: 2018-12-26

RATED BY: Performance
Insulation & Energy Services

CCB #: 199448

Utilities:

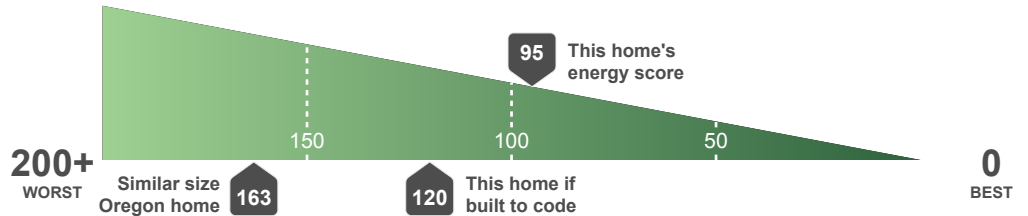

Gas: NW Natural Gas

Electric: Portland General Electric

Energy Score

95

ENERGY SCALE: Based on home energy use of natural gas, electricity, or energy generated from an installed renewable system.

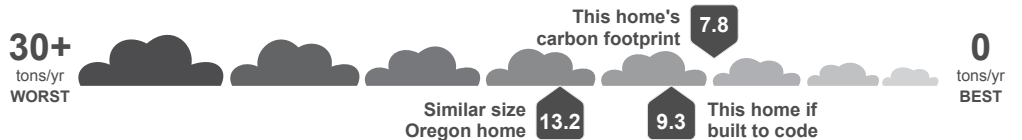

Estimated total annual gross energy usage: Electric (kWh): 8,424, Natural Gas (therms): 661

Estimated average annual energy generation: No system

Estimated average net energy usage: Electric (kWh): 8,424*, Natural Gas (therms): 661

CARBON FOOTPRINT:

Measured in tons of carbon dioxide per year (tons/yr). One ton ≈ 2,000 miles driven by one car (typical 21 mpg car).

Estimated average carbon footprint: Electric (tons/yr): 3.9, Natural gas (tons/yr): 3.9

*Actual energy costs may vary and are affected by many factors such as occupant behavior, weather, utility rates and potential for renewable energy generation.
